PROJECTS

BLOG API: CRUD posts with JWT authentication

- 2 frontends. One for registered users and another for unregistered users. React with Typescript for the DOM, React Router for navigation, Zustand used for global state management, and Tanstack/React Query for data fetching and mutation.
- API (REST) runtime environment used is NodeJS with Express using Typescript. Database uses PostgreSQL with Prisma ORM. Authentication uses JWT: Refresh Tokens stored in HttpOnly cookies and In-Memory for Access Tokens.
- **Source:** <https://github.com/RGPin/top-blog-api/>

FILE UPLOADER: File storage with basic authentication

- Frontend made using React with Javascript, React Router, and Zustand.
- API made with Express in NodeJS. Files are stored using Supabase Storage. Authentication made using PassportJs (Local Strategy) and Express Sessions. Password hashed with bcryptjs. User data, sessions, and file metadata are stored using PostgreSQL with pg (PostgreSQL client).

MEMBERS ONLY: CRUD posts with basic authentication

- Used EJS for the DOM. EJS files are served from server made using Express. Made using the MVC pattern, Database with PostgreSQL, and authentication using PassportJs (Local Strategy).
- **Source:** <https://github.com/RGPin/top-members-only/>

INVENTORY: Inventory management

- EJS files served from the server made using Express. Database uses PostgreSQL with pg.
- **Source:** <https://github.com/RGPin/top-inventory/>

SHOPPING CART: Shopping cart interface

- Made with React JS, React Router for navigation, and Context API for global state management. Data fetching from an online REST API and data cached using Session Storage.
- **Source:** <https://github.com/RGPin/top-shopping-cart/>

SUMMARY

- **GitHub:** <https://github.com/RGPin>
- **Skills/Tools/Technologies:**
 - TypeScript, JavaScript, HTML, CSS, EJS
 - React, React Router, React Context API, Tanstack/React Query, Zustand
 - Vite, REST APIs, NodeJS, Express, PostgreSQL, Prisma, Supabase, JWTs, PassportJs
