Portfolio Projects (all live demos in [Portfolio](#)):

Full-Stack Blog Platform | React, TypeScript, Node.js, TanStack Query

- Developed a full-stack blogging platform with separate public and authenticated user experiences using React, TypeScript, Express, Prisma, and PostgreSQL.
- Implemented JWT authentication with rotating refresh tokens stored in HttpOnly cookies and short-lived access token handling.
- Created post and comment CRUD workflows with TanStack Query for server-state management and Zustand for client-side state management.

File Hosting Platform | React, JavaScript, Node.js, Supabase Storage

- Developed a secure file management platform with REST API endpoints for uploading, retrieving, deleting, and managing file metadata.
- Implemented session-based authentication using Passport.js, bcrypt, and PostgreSQL with user-isolated file storage through Supabase Storage.

Members-Only Community Platform | HTML, CSS, Node.js, PostgreSQL, EJS

- Created a server-rendered community platform using Express, EJS, PostgreSQL, and Passport.js authentication.
- Implemented authorization controls allowing users to create, update, and delete only their own posts.
- Applied MVC architecture to organize routes, controllers, database operations, and views.

PC Component Inventory Dashboard | Node.js, Express, PostgreSQL, EJS

- Built an inventory management dashboard for tracking computer hardware records with PostgreSQL-backed CRUD functionality.
- Designed an MVC-based Express application structure separating routing, business logic, database operations, and server-rendered views.

Education & Licenses:

Bachelor's in Electronics Engineering, Saint Louis University
Licensed Electronics Engineer
Licensed Electronics Technician

Status: Graduated
PRC Granted
PRC Granted

Technical Skills:

- TypeScript/JavaScript
- HTML, CSS, React, EJS, React Router, React Context API, Zustand, TanStack Query
- Express, PostgreSQL, JWTs, REST APIs
- Node.js, Vite, Prisma
